

- Have your staff, students, and or personnel received any training on responding to an active threat or critical incident resulting in casualties?
- Are you prepared as an institution to face this contingency?
- If so, what is the plan?

Remember, you and others **OWN THE TIME** from the onset of a critical incident until first responders arrive; emergency response times are unpredictable based on countless variables. What you thought would be five minutes may turn out to be much longer.

*"It is appropriate that experience during unavoidable 'epidemics of trauma' be exploited in improving our national capability to provide better surgical and medical care for our citizens."*  
 - Spurgeon Neel, Colonel, US Army Medical Corps.

# Empowering you to save lives

**CommandLogic 360** strives to serve a cross-section of Homeland sectors, as a premier marketplace to promote cutting-edge ideas, products, and services.

Through its **Spartan Academy**, CommandLogic 360 offers first-rate Emergency Management consultation services to a wide array of stakeholders seeking a holistic approach to emergency preparedness.

We collaborate with **Techline Trauma** utilizing realistic simulation equipment.

## Point-of-Wounding Care Course & Kit

## Why should you train?

School shootings, terrorist attacks, accidents, workplace violence, disasters - some of us will find ourselves in the midst of such unspeakable calamity. Police, Fire, and EMS are on the way to your location, but what will you do in the meantime? **YOU CAN TAKE ACTION!!** With the right "know-how" and appropriate tools, even the layperson can ensure that the otherwise mortally wounded patient gets to the hospital **ALIVE ON ARRIVAL.**

Lessons learned from the field of combat medicine have revolutionized approaches to treating military casualties prior to definitive care in a hospital - especially at the point-of-wounding. The result has been an astounding decrease in mortality rates for our service men and women wounded in military conflict.

The crossover implications are apparent - but not just for civilian EMS and other first responders. More often than not, it is the civilian layperson that is in the best position to take life-saving action!

offers

## Point-of-Wounding Care One or Two-Day Courses

**Courses are delivered by experienced instructors from CL360's Spartan Academy with backgrounds in the military, emergency medicine, law enforcement, and fire/emergency medical services.**

**P-O-W Care training is tailored for the civilian layperson (security personnel, private stakeholders) - yet is perfectly suitable for first responders (e.g., campus police departments.)**

TOMManikin and Wearable Wound Simulations provided by Techline Trauma

### COURSE TRAINING INCLUDES:

- Threat awareness & response
- Relevant anatomy & physiology associated with serious trauma (gunshot wounds, stab wounds, blast injuries, etc.)
- Hands-on training on medical interventions with POW Kit devices
- Guaranteed skills proficiency through ample practice during hyper-realistic scenarios employing high-tech trauma manikins and moulage.

## P-O-W CARE Curriculum Highlights

- Hemorrhage Control for Compressible Wounds
- Management of Airway & Breathing
- Basic Triage for the Civilian Layperson
- Managing Complications: Recognition & Interventions (shock, etc.)
- Hasty Casualty Movement
- Body Substance Isolation

## P-O-W KIT

The **P-O-W Kit** contains life-saving medical adjuncts and personal protective equipment (PPE):

- Combat Application Tourniquet (CAT)
- SWAT Tourniquet (SWAT T)
- Quick Clot Combat Gauze
- Bolin Chest Seal
- CPR Face Shield
- Nitrile Gloves
- Clothing Shears
